

SAJI KUTTAN

Full Stack Developer

✉ sajikuttanfsdjs@gmail.com | ☎ 9594205966 |  <https://www.linkedin.com/in/saji-kuttan-fsd-js/>

SUMMARY

Experienced software developer with a passion for solving complex business problems using innovative solutions. Proven ability to deliver high-quality software solutions for fortune clients, resulting in significant outcomes. Thrives in dynamic environments and eager to take on new challenges, bringing expertise in React, Angular and Node js to your team.

SKILLS

- React JS
- Angular JS
- Node JS
- Jenkins Pipeline
- SQL
- Azure Cloud.

EDUCATION

- **Model College, Mumbai University Bachelor of Science, Information Technology (2018)**
C.G.P.A.: 6.57

CERTIFICATES

- Ethereum and Solidity:
The Complete Developer's Guide (UDEMY)
- Learn Blockchain By Building Your Own In JavaScript (UDEMY)

GITHUB PROJECTS

- **Kick-start Blockchain Application**
 <https://github.com/sajikuttan/Kickstart-Boilerplated.git>

A user-friendly interface with an efficient payment system, robust security measures, automated processes, and integration with popular cryptocurrencies make this small blockchain-based crowdfunding application optimized for efficiency.

Skills: React, Next JS, Solidity.

- **Blockchain Lottery Application**
 <https://github.com/sajikuttan/Blockchain-Lottery-React.git>

Skills: React, Solidity.

HOBBIES

- Football
- Cycling
- Travelling

EXPERIENCE

Senior Software Engineer

HCL TECH

Jan 2022 - present

- As a software developer, I collaborated closely with clients to understand their user stories and delivered software solutions that exceeded their expectations.
- By leveraging my expertise in React and other JavaScript technologies, I was able to improve the software development process, resulting in quicker and more efficient delivery of high-quality products.
- Through effective communication and collaboration, I established strong relationships with clients, earning their trust and becoming their go-to resource for software development needs.

Software Engineer

INFOSYS PVT LTD

Oct 2018 - Dec 2021

- As a software developer, I collaborated closely with clients to understand their user stories and delivered software solutions that exceeded their expectations.
- By leveraging my expertise in Angular and other JavaScript technologies, I was able to improve the software development process, resulting in quicker and more efficient delivery of high-quality products.
- Through effective communication and collaboration, I established strong relationships with clients, earning their trust and becoming their go-to resource for software development needs.

Internship

ACCUNITY SERVICES

April 2016 - Aug 2018

- AS an intern at a start-up company, I had the opportunity to work on real projects and learn new technologies while gaining valuable experience in the IT industry.
- I collaborated with clients in person to collect their requirements, enabling me to develop a deeper understanding of their needs and how to meet them effectively.
- Through my dedication and hard work, I helped the company to explore and improvise, contributing to its growth and success. This experience was a significant milestone in my IT career, providing me with a strong foundation and preparing me for future opportunities.

PROJECTS

AI Chat Bot

A chat-bot software for a globally leading banking company to enable all banking services like add payment methods, connect to a live chat user, make debit card payments, and more to their users.

Roles and Responsibilities:

As a software developer, my responsibilities included designing and developing the software solution and collaborating with the project team to ensure successful implementation.

Achievements:

It has significantly reduced the need for manual support employees, replacing them with an AI-built chat-bot, led to a 50% reduction in bank costs and an 80% productivity increase in their services.

Skills: React JS, Redux, Node JS, Jenkins Pipeline, JIRA Board.

Escalators & Elevators CMS Application

A software for a globally leading company in the elevator and escalator industry for generating a summary and graph of estimated project costs to help clients with proposals. The project involved implementing a custom software solution to calculate the costing mechanism across multiple geographical locations.

Roles and Responsibilities:

As a software developer, my responsibilities included designing and developing the software solution and collaborating with the project team to ensure successful implementation.

Achievements:

The software reduced manual recording process from Excel sheets to a well-developed software with built-in graphs and accurate cost calculations. It also created software-generated proposals in PDF, Excel, Word, and PowerPoint presentation formats.

Skills: Angular JS, Node JS, Azure Pipeline, Azure Board.
